### **TRI to provide Clinical Trials Auditing and Informatics Support to the National Cancer Institute**

*Bethesda, Maryland (June 9, 2014):* Technical Resources International, Inc. (TRI) is pleased to announce that TRI has been awarded the Cancer Prevention Clinical Trials Auditing and Informatics Support contract by the National Cancer Institute (NCI), National Institutes of Health. The contract has a potential maximum value of up to \$19 million over 5 years.

Under this contract, TRI will provide NCI's Division of Cancer Prevention (DCP) with comprehensive clinical trial oversight capability for the cancer prevention clinical trials program by providing services for data management, auditing and data verification, and education and training to staff conducting cancer prevention clinical trials.

NCI DCP conducts and supports research to determine a person's risk of developing cancer and to determine methods to reduce that risk. Research fostered by DCP focuses on translational prevention and detection. It also spans the disease process: early interventions to stop or slow the progression of cancer; symptom management during treatment; and supportive care at the end-of-life. Investigators supported by DCP are generating new information about molecular processes that are vulnerable to interventions; developing effective chemoprevention agents; discovering early detection biomarkers; pinpointing mechanistically targeted nutrients; testing new screening methods and technologies; and conducting phase I, II, and III clinical trials in prevention and control through national networks and at the community level.

Commenting on the contract award, Nora Lee, TRI's President and CEO expressed, "TRI is proud to engage in this critical work with NCI DCP. We are delighted to be selected and look forward to supporting DCP in its mission."

DCP is the primary unit of the NCI devoted to cancer prevention research. DCP provides funding and administrative support to clinical and laboratory researchers, multidisciplinary teams, and collaborative, research-based networks.

**About TRI:** Technical Resources International, Inc. is a full-service contract research organization plus (CRO+). TRI's areas of expertise include clinical trials management, regulatory affairs, medical writing, safety & pharmacovigilance, data management & biostatistics, quality assurance, information technology, toxicovigilance, and health assessment. In addition, TRI offers health communication services such as multi-level event planning and execution, design and implementation of marketing and outreach campaigns, multimedia design, focus groups, surveys, trainings, and product launches. For more than 34 years, TRI has provided support to government agencies, the private sector, and non-profit organizations.
